DATA SHEET

ACRYNET 64

Glass fibre net primed with anti-alkaline additive

CHARACTERISTICS

Acrynet 64 is a glass fibre net with 4 x 5 mm mesh, primed with an anti-alkaline additive. Acrynet 64 may be used as reinforcement for waterproofing systems (acrylic, polyurethane, cement, etc.), greatly increasing the mechanical strength. This product is difficult to apply on irregular surfaces and should therefore be used on only flat vertical or horizontal surfaces; the reinforcement should be fully submerged in the product. Overlap adjacent sheets of the reinforcement by at least 5 – 10 cm.

PROPERTIES

Characteristic	U.M.	Value	Tolerance
Grammage	gr/sq.m	64	± 3%
Mesh size	mm	4 x 5	
Elongation at tensile strength	longitudinal	N/5 cm	800
	transversal	N/5 cm	1000
Mesh type	braided		

PACKAGING

Length	50 m
Width	1 m
